Owner: _____ Case No: (Office use) _____
Street: _____ City: _____
Phone: _____
Patient: _____ Breed: _____
Sex: Male / Female (circle one) Age: _____
Color: _____

PROCEDURE: _____

CURRENT MEDICATIONS: _____

Your pet will be undergoing general anesthesia plus a surgical procedure today. In order to recognize any underlying abnormalities your pet may have, your pet needs a pre-surgical blood profile. This consists of CBC, which will check blood cells, and a (ALT, ALKP, CREA, GLU, TP, and BUN), which will check blood glucose, kidney and liver enzymes. These blood tests will help us to assess the health status of your pet more completely and determine if there are any additional precautions we need to take before surgery. A pre-surgical blood profile is mandatory for geriatric animals (animals over 7 years old).

There is an additional charge of \$65.50 for these blood tests. We hope you understand the need for these important tests.

I DO DO NOT wish to have the pre-surgical blood work run today.

It is very important to have immediate access to your pet's bloodstream during surgery. For safety, our doctors and technicians will place an IV catheter and administer IV fluids to maintain your pet's blood pressure and flush the organs that handle anesthesia. IV catheter and fluids are included in the price of your surgery.

Surgery is painful. Eliminating pain is an important part of your pet's recovery. Included in the price of surgery, your pet has been given an injection to control pain for 24 hours. For an additional charge of \$15.00- \$25.00 (medication dosage is based on your pet's weight), we will send your pet home with pain medication you give by mouth to control pain for 3 additional days.

I DO DO NOT wish to have pain management to give at home for my pet.
